Are You Losing Money on High Electricity Costs?

South African businesses are struggling with rising energy costs, relentless loadshedding, and unpredictable power tariffs. **This Solar Savings Checklist** will help you identify financial leaks and determine whether solar energy can protect your business from unnecessary expenses and operational disruptions.

Business Solutions

The Solar Savings Checklist

1. Are Electricity Costs Out of Control?

- Have your electricity bills increased significantly over the past year?
- Are unpredictable tariff hikes making it hard to manage expenses?
- Are you looking for ways to lock in predictable energy costs?

Solution: Installing commercial solar panels can stabilise costs and protect your margins from relentless price hikes.

2. Is Load Shedding Hurting Your Business?

- Do power outages cause downtime and lost revenue?
- Are delayed projects, missed deadlines, and unhappy customers an issue?
- Does your business lack a reliable backup power solution?

Solution: Solar with battery storage ensures uninterrupted operations during loadshedding, preventing costly disruptions.

3. Are You Getting the Best Value from Your Generators?

- □ Is your business relying heavily on diesel generators for day-to-day operations?
- Are you wanting to reduce maintenance and fuel costs?
- Are you looking for a more sustainable, long-term energy solution?

Solution: Pairing generators with solar power and UPS backup reduces fuel usage, lowers running costs, and supports a cleaner energy mix.

4. Are Peak Tariffs Hurting Your Margins?

- Do your operations require high energy use during peak hours?
- Are you paying premium rates for electricity at peak demand times?
- Are you looking for ways to reduce overhead costs?

Solution: Solar energy offsets peak pricing, ensuring lower energy costs during high-demand periods.

5. Is Power Instability Damaging Your Reputation?

- Have clients or customers complained about service disruptions?
- Are frequent outages making your business seem unreliable?
- Do you need a solution to maintain operations during power failures?

Solution: An uninterruptible power supply (UPS) with solar keeps your business running smoothly, safeguarding your reputation.

6. Are You Falling Behind on Sustainability Goals?

- Are potential clients or partners prioritising eco-friendly businesses?
- Are sustainability initiatives part of your long-term strategy?
- Are you at risk of missing out on business opportunities due to high carbon emissions?

Solution: Corporate solar solutions strengthen your environmental commitment and position your business as an industry leader in sustainability.

7. Do You Have Unused Roof Space?

- Do you have available rooftop space that is not being utilised?
- □ Would you like to turn unused space into a money-saving asset?
- Are you looking for ways to improve operational efficiency?

Solution: Installing solar panels on business premises converts wasted space into an energy-generating asset.

8. Is High Energy Spend Slowing Business Growth?

- Are rising electricity bills reducing your ability to invest in growth?
- Could you be using your energy savings to expand your business?
- Are you looking for ways to increase profitability?

Solution: Business solar solutions free up capital by cutting energy expenses, allowing your business to reinvest in expansion and innovation.

If you checked three or more boxes, it's time to consider a solar energy solution for your business. Every delay in switching to solar means more money lost on unnecessary energy expenses.
